

bp plans to develop **HyVal**,
a green hydrogen cluster
near Valencia

Aiming for production
capacity of up to **2GW**
at Castellón refinery
by 2030

Helping to reduce carbon
emissions at the refinery and,
in time, **hard-to-abate** sectors

And supporting the
decarbonization
of the Valencia
region

A reminder on green hydrogen

Green hydrogen is a lower emission alternative to other forms of hydrogen
