

Hydrogen Hub Wilhelmshaven

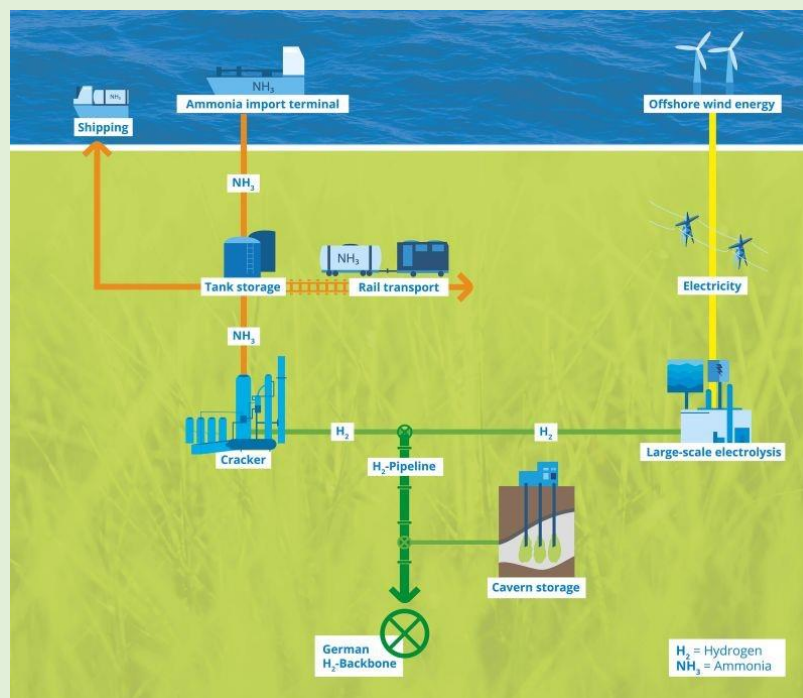

Green Wilhelmshaven projects recognised by the EU for contribution to Europe's energy infrastructure.

Wilhelmshaven Electrolyser and Terminal have been deemed by the European Commission as Projects of Common Interest. The status is given to projects that contribute to the key objective of realising a climate-neutral European Union by the year 2050.

Green Wilhelmshaven Electrolyser project boasts an electrolyser capacity of up to 1 GW and leverages the region's renewable energy resources to bolster domestic green hydrogen production.

The Green Wilhelmshaven Terminal project facilitates the importation of renewable ammonia via maritime transport and enables the extensive conversion and integration of hydrogen into the European hydrogen network.
