

VIKING LIBRA

**THE WORLD'S FIRST HYDROGEN-POWERED
CRUISE SHIP**

Currently under construction at the Fincantieri
Ancona shipyard

Viking Libra is the result of the joint initiative with **VIKING** and is made possible by the **disruptive new technologies** of **ISOTTA FRASCHINI MOTORI**, part of Fincantieri Group.

The vessel will feature first-of-a-kind solutions to **load and store hydrogen directly onboard** the ship thanks to a containerized system to overcome supply chain constraints. Hydrogen will power **polymer electrolyte membrane fuel cells system** specifically optimized for cruise operations.

TWO NEW UNITS

Fincantieri and Viking have also signed an agreement for the construction of two new cruise ships, plus an option for two additional vessels.
