Hydrogen-Powered Business Jet

A NEW ERA IN AVIATION

Hydrogen Aviation Focus Group members may find this
from my friends at Sirius of interest?

Lifting the veil on the Sirius Jet, the world's first hydrogen-powered business jet, along with a partnership with BMW Group Designworks.

On Thursday, at the MOVE Expo in London, we will showcase the future of aviation. This isn't just an event you must attend; it will be a leap towards sustainable, high-tech air travel that is light-years ahead of existing aircraft.

Our innovative technology and design have never been seen before, setting new standards in the aviation industry. The Sirius Jet represents the pride of ownership in a future-conscious world because this is the first sustainable business jet where people will no longer feel guilty for using a jet and producing emissions.

Additionally, flight shaming will be a thing of the past for owners of the Sirius Jet, as it exemplifies responsible and eco-friendly air travel.
