- I have been helping our clients with original and innovative design for years. My extensive experience in software development allows me to handle projects from initial concept through implementation and beyond. I'll take your unique features

Custom Chrome extension development and Stripe Payment integration for SMEs and startups.

Chrome Extension

My Services

I excel in integrating APIs for platforms like Shopify, Bitrix 24, Moodle, and more.

API Integration

Comprehensive elearning solutions, including Moodle integration.

E-learning /LMS Solutions

I develop mobile solutions for your business. We are familiar with Flutter & Android Development

Mobile Solutions

My commitment to excellence extends beyond project completion.

Training & Support

Chrome Extension

With automation, users can create custom scripts and macros to automate tasks such as form filling, data extraction, and web scraping.

Customized Browsing experience

Clients can enhance their browsing experience by adding features and tools that suit their specific needs. These extensions allow users to personalize their browser by customizing the appearance, managing tabs, and much more.

Stripe+Firebase for Payment Integration

Custom Middlewares + Integration

Middlewares provide a way to handle authentication, error handling, and ensuring smooth communication between the extension and the API. By creating middlewares, we can effectively integrate the extension with the desired 3rd party API.

The challenge presented by the client involves developing an extension that allows for sending mass messages on the Skool platform. This task requires careful consideration of the platform's messaging capabilities and user interface to ensure seamless integration and user experience.

Airtable Development

Airtable Scripting

Automate your workflow

Airtable Automation as a Service offers robust functionality for streamlining workflows by automating repetitive tasks within the Airtable platform.

Customized Block extension

By providing an ecosystem for developing tailored workflows, the Block Extension to create interactive dashboards and automate tasks, thereby increasing and organizations.

Airtable Block SDK

- facilitates improved project management and
- collaboration. Users can leverage this service
- productivity and efficiency within their teams

3rd Party API Integraton

Seamless data exchange, enabling teams to maintain efficiency and organization across diverse operational tasks.

Airtable Development, this covers the development for Airtable Scripting, which shows the development of custom extensions for the platform, using React and Airtable API.
